

Connectivity

Wireless Link Rental

The MWEB Business Wireless Link Rental solution is an outdoor wireless high-speed point-to-point offering that enables customers in the Amobia WiFi coverage area to connect to the MWEB Data Centre - without needing a traditional telco line.

Offered in partnership with Amobia Communications, Wireless Link provides customers with an alternative way to connect offices, branches and other locations to each other via the MWEB Data Centre, using a high-speed wireless link that is both cost-effective and fast to implement.

Formed in 2005, Amobia Communications is an independent network infrastructure specialist that builds outdoor fixed wireless access networks, providing point-to-point connectivity for customers in the Amobia WiFi coverage area.

Product features

Amobia will install and configure a hardware device at the customer's premises to connect them via WiFi to the MWEB Data centre, from where customer is routed accordingly. Line speed is offered in increments of 64K up to 2 048K. MWEB Business can also provide Internet connectivity via the same solution, for an additional fee.

Site inspection and installation takes approximately two weeks (compared to anything up to six months for a telco line option), and installation rates are among the lowest in the market. The technology acts as an ideal failover offering in that it requires no copper for installation, which means customers are not affected by copper theft.

Product benefits

The Wireless Link Rental solution includes free site inspection at the customer premises, as well as the necessary hardware, cable and brackets, and a one-year equipment warranty. The network is built on a fully redundant wireless backbone.

Wireless Link Rental has the largest wireless coverage area in South Africa, which includes:
